

# Zeomineral *Coolfit*

**Dietary supplement for the joints and cartilage**

Coolfit does not contain the whole molecule of collagen, which is difficult to absorb, but an extract of it, a type II peptide, which is quite a small molecule and has an excellent absorption capacity.

Type II peptide is solely responsible for the regeneration of joints and cartilage! The body will not use the molecule to build bones, nails, skin, etc., meaning all the active ingredients will flow immediately into the damaged joints.

Due to this, Coolfit is much more efficient than other average collagen products.

1.

# Zeomineral *Coolfit*

Dietary supplement for the joints and cartilage

Since inflamed body parts are difficult to regenerate, the product also contains the enzyme bromelain and curcumin.

They have antibacterial, anti-inflammatory and analgesic effects. They increase the ability of collagen peptide to be incorporated multiple times over.

Daily dose: 3x2 capsules

Packaging: 180pcs
