

Zeomineral *entero* Medical device

The special physiological effect of the 13 million-year-old Tokaj-Hegyalja zeolites is unique in the world.

Volcanic material supply and the weathering that follows it, gave the rocks special properties.

Zeomineral entero is an oral powder containing two types of zeolites. It is a natural mineral with a strong absorption and ion exchange effect and is rich in secondary bio-elements and bio-trace elements.

Secondary bioelements: Fe, Mg, Ca, Na, K

Bio-trace elements: Li, B, J, Cl, Br, Al, Si, Ti, Cr, Mn, Co, Cu, Zn, Se, Mo, Bi, V, Rb

The specific effects of this product on the human body are described below:

Zeolite

Zeomineral *entero* Medical device

Molybdenum

Effective, rapid reduction and elimination of diarrhea, bloating, and heartburn.
Alleviation and prevention of the symptoms of food allergy, food intolerance, enteral infections, treatment of mild food poisoning,
Medical device for the treatment and alleviation of the symptoms of chronic gastrointestinal diseases, IBS, ulcerative colitis, cholecystopathy

MECHANISM OF ACTION:

Zeolites are minerals with a lattice structure. Due to the characteristic structure of zeolite, it has significant adsorption, molecular filtration and ion exchange properties.

APPLICATION:

FOR ADULTS:

The usual dosage is 1 teaspoon of powder mixed with liquid three times a day for up to 30 days. It can be used again after a break of 3-4 days.

FOR CHILDREN:

Ages 6-14: 1-2 x 2 teaspoons daily for 1-2 days.
