

# Zeomineral *CBD-Oil*

Regenerating oil with natural phytocannabionid, black nettle seed oil and astaxanthin

The cannabinoid extracted from the resin of the hemp inflorescence exerts its beneficial effects by influencing our own endocannabinoid system. CBD oil is extracted from the cannabis inflorescence in such a way that the THC content is significantly reduced during the process.

The endocannabinoid system is present throughout the body, including the brain, nervous, digestive, and immune systems, so plant phytocannabinoids are able to counteract all the problems of these systems.

The range of CBD oil-rich products is very wide. It is found in dietary supplements, some medicines, and has also been discovered by the beauty industry as an excellent active ingredient.

To use: Apply to skin, then massage it into the skin.

Packaging: 250 drops in 10ml / 500 drops in 20ml

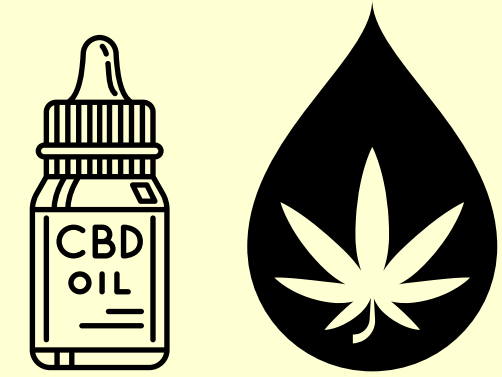

# Zeomineral ***CBD-Oil***

Regenerating oil with natural phytocannabionid, black nettle seed oil and astaxanthin

## Ingredients:

- Organic hemp seed oil,
- Black nettle seed oil,
- Haematococcus pluvialis alga powder

## CBD:

CBD oil contains a multitude of cell-protective antioxidants that also fight harmful free radicals that are responsible for premature skin aging.

It is able to normalize the function of the sebaceous glands. In addition, it is a remarkable anti-inflammatory that enhances the success of the fight against acne. Influencing the endocannabinoid system is able to prolong the life cycle of cells, resulting in a younger skin image.

Healthy, youthful skin depends on the appearance of new cells. Manipulation of the endocannabinoid system can help regulate the life cycle of cells for radiant, younger skin.

Skin Problems: Although CBD oil appears to be an effective beauty product, such as anti-aging and acne, its ingredients can also hold promise in the treatment of many more serious skin conditions.

Regenerating oil with natural phytocannabionid, black nettle seed oil and astaxanthin

Black nettle seed oil, or PERILLA: The cold-pressed oil of Perilla, or Chinese basil, known only as black nettle in Hungary, is very popular in beauty care as well as in Asian medicine. Its mint-like aroma and light texture are immediately absorbed upon contact with the skin. It is one of the largest sources of omega-3 in plants and contains more than 50% of alpha linolenic acid, which has a strong cell regenerating effect. It also contains linolenic acid and oleic acid, which have anti-inflammatory and antibacterial properties. Softens fine wrinkles and supports the skin's natural collagen production. Due to the high antioxidant content of the oil, it is excellent for aging, mature and dry, possibly itchy skin. The oral effect is very much discussed in medical literature and many of its beneficial properties are discussed.

Astaxanthin: A natural protector of the skin. As a powerful and effective antioxidant, the drug accumulates in the skin cells and beautifies the skin from within. As a person ages, the antioxidant content of the skin decreases and, consequently, it needs to be replaced, either from food or externally, to increase the moisture and elasticity of the skin and reduce wrinkles.

Astaxanthin may be able to prevent oxidative damage to the skin. The strongest natural antioxidant.
