

Zeomineral

# Krill Oil

Dietary supplement capsule made from Antarctic krill caught in the waters around Antarctica, Norway

Omega-3 is a natural source of fatty acids.

A bioactive product rich in astaxanthin.

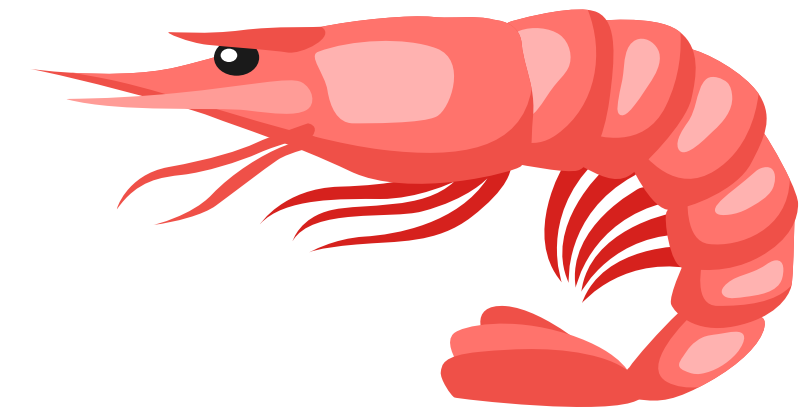

An effective tool for cell protection and regeneration.

Krill Oil is rich in all the active ingredients that help the proper functioning of the heart, brain and nervous system.

Krill oil capsules contain 500 mg of Antarctic krill oil, which is rich in phospholipids that effectively take in omega-3 fatty acids. Antarctic krill is a pure source of marine omega-3 EPA and DHA.

Daily dose: 2x1 capsule

Packaging: 60 pcs

Dietary supplement capsule made from Antarctic krill caught in the waters around Antarctica, Norway

## Active ingredients:

- **OMEGA-3**: Oil extracted from Antarctic krill - shrimp-like red crabs - contains Omega-3 fatty acids in a more effective form than fish oil. This form is a phospholipid bond. This type of binding readily crosses the human cell membrane, with absorption efficiencies that are multiple compared to lipid-free binding. High levels of EPA and DHA contribute to the proper functioning of the heart. In addition, DHA fatty acids also help maintain normal brain function and vision.
- **Astaxanthin**: Krill feed on algae rich in astaxanthin. Astaxanthin is the strongest antioxidant in current research. It belongs to the group of carotenoids, from which the krill and the oil made from it get their characteristic red colour. Astaxanthin provides protection to cell membranes, prominently to brain cells. It helps with proper brain and nervous system function.
