Xan-Save-SPF30

Aloe Vera moisturizing sunscreen with clay minerals and Astaxanthin for Adults

Skin-friendly, uniquely formulated sunscreen, lasting protection for all members of the family!

SPF30: There are many positive physiological processes in the body when exposed to sunlight.

It is enough to think that vitamin D is produced in the body as a reaction to the the sun's rays. Most people are now deficient in vitamin D. Staying in the sun is beneficial and important, but we need to protect our skin from harmful effects and radiation. Many of us wouldn't think, but it does matter where the radiation reaches us, where we expose ourselves to the sun. In the mountains, above 1500 m, the sun's rays are much stronger than, for example, in the Great Plain. A few minutes is enough to get a sunburn. On the waterfront, the sand and water surface reflect the sun's rays, so your skin may be burned even under an umbrella. Moles need to be protected as they are sensitive to sunlight and can easily become malicious if not properly protected. It is also important to pay attention to the protection of scars, surgical wounds that are highly sensitive.

Aloe Vera moisturizing sunscreen with clay minerals and Astaxanthin for Adults

Astaxanthin: A natural protector of the skin. As a powerful and effective antioxidant, the drug accumulates in the skin cells and beautifies the skin from within. It increases the moisture and elasticity of the skin and reduces wrinkles. Astaxanthin may be able to prevent oxidative damage to the skin. The strongest natural antioxidant.

AloeVera: The gel inside is great for sunburn, for example, as it cools and soothes the skin. Due to its natural anti-inflammatory effect, it can be used to alleviate and treat many problems in many ways.

Clay mineral (smectite): Fe, Mg, Ca, Na, K Contains the most important building cations of the skin.

Jojoba Oil: It has a water-binding effect - it forms a protective layer on the skin and helps keep fluid inside, making it a great moisturizer. It also helps prevent the development of bacterial infections.

Shea butter: Its basic effect is that it makes the skin finer, softens wrinkles, and reduces skin irritations and acne. The vitamin E and beta-carotene in it have an emollient and regenerating effect. Other uses include reducing the symptoms of eczema and psoriasis.
