Xan-Save-SPF50

Aloe Vera moisturizing sunscreen with clay minerals and Astaxanthin for Kids

Skin-friendly, uniquely formulated sunscreen, lasting protection for our children!

We have a responsibility to protect our children. Their skin doesn't forget anything either.

It should be protected from an early age to prevent later damage.

The skin of babies and young children does not produce a natural pigment, called melanin, which protects it against high levels of UV radiation. But it is also incapable of repairing the damage caused by UV radiation. Therefore, sunbathing is strictly forbidden for babies.

SPF50: For kids. We have a responsibility to protect our children. Their skin doesn't forget , either. It should be protected from an early age to prevent later damage. The skin of babies and young children does not produce a natural pigment, called melanin, which protects it against high levels of UV radiation. But it is also unable to repair the damage caused by UV radiation. Therefore, sunbathing is strictly forbidden for babies.

For older children, the recommended equipment consists of a high sun protection factor cream (SPF 50 is the safest), sunglasses with UV filter, headgear and, if possible, clothing with UV protection. Don't forget about parts like ears, feet, head and neck, either!

Aloe Vera moisturizing sunscreen with clay minerals and Astaxanthin for Kids

Astaxanthin: A natural protector of the skin. As a powerful and effective antioxidant, the drug accumulates in the skin cells and beautifies the skin from within. It increases the moisture and elasticity of the skin and reduces wrinkles. Astaxanthin may be able to prevent oxidative damage to the skin. The strongest natural antioxidant.

AloeVera: The gel inside is great for sunburn, for example, as it cools and soothes the skin. Due to its natural anti-inflammatory effect, it can be used to alleviate and treat many problems in many ways.

Clay mineral (smectite): Fe, Mg, Ca, Na, K Contains the most important building cations of the skin.

Jojoba Oil: It has a water-binding effect - it forms a protective layer on the skin and helps keep fluid inside, making it a great moisturizer. It also helps prevent the development of bacterial infections.

Shea butter: Its basic effect is that it makes the skin finer, softens wrinkles, and reduces skin irritations and acne. The vitamin E and beta-carotene in it have an emollient and regenerating effect. Other uses include reducing the symptoms of eczema and psoriasis.
